

How do I create a CNAME record for my custom domain?

A CNAME, or Canonical Name, record is an entry within the Domain Name System (DNS) that specifies where a user can find your web pages, or any other URL. You'll use this to associate your custom domain with your blog.

After registering your domain, decide if you want to use a particular subdomain for your blog. E.g. instead of www.mydomain.com you could use something like blog.mydomain.com, if you want. Then you'll create a corresponding CNAME record for that address, associating it with www.compendiumblog.com. Keep in mind that changes to DNS records make take up to 48 hours to take effect.

Each hosting service has slightly different ways to create CNAME records. Guidelines are provided here for some of the common services. When in doubt, check with the particular company you're using for additional help or instructions.

[CNAME Record: myhosting.com](#)

1. Go to <http://myhosting.com>.
2. Click on the **Account** link at the top of the page.
3. Log in with your Domain Name and Password.
4. Click on the **Domain Name** tab.
5. Click **DNS Management** in the left-hand pane.
6. Click the **Manage DNS** button.
7. Add the following **ALIAS (CNAME) RECORDS**.

ZONE SERVER

calendar (or whatever custom URL you choose) points to **www.compendiumblog.com**
